DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-21, drawn to a self-valving vacuum distribution system and a sheet-actuated vacuum assisted sheet conveyer, classified in class 271, subclass 108.
- II. Claims 22-25, drawn to a method for vacuum assisted transfer of sheets delivered in serial spaced relation, classified in class 271, subclass 194.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process can be practiced by any apparatus that performs the claimed sequence of process steps as set forth in claims 22-25. In other words, the process can be practiced by another materially different apparatus.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
